

Media creator for digital medical image distribution

Dicom Burn

Dicom Burn is a versatile media creator for high volume imaging centers that allows users to create CD, DVD and Blu-ray (BD) media from anywhere on the network for digital image distribution.

Supporting the leading CD, DVD and BD publication hardware, Dicom Burn reduces the cost of film distribution, improves operational workflow and provides a highly professional product for patients and long term management.

Dicom Burn receives DICOM studies from multiple DICOM sources (Modalities, Servers, Viewers or Workstations) and creates a standard DICOM 3.0 part 10 CD, DVD or BD with an autorun viewer burned with the study. The system has the ability to automatically print a label on the CD, DVD and BD with the patient and study information found in the DICOM header of the images.

Included features:

- Touch interface for easy management
- Support for CD, DVD, BD
- Send studies directly from Modality
- Send studies from DICOM Viewer
- Do Query & Retrieve to PACS server
- Re-record media
- Create your own Media projects from within the user application
- Include your own labels to personalize your media
- Highly customizable, flexible and scalable
- Import Studies from CD, DVD and BD to PACS
- Settings blocked for administrators

Features for partners:

- Personalized Application with your own brand
- Include logo of brand and company
- Second-line support
- Online remote support
- Online private area:
 - Request licenses
 - Create new client accounts
 - Activate demo applications
 - Cancel and suspend applications
